

Index

- 2**
- 2,2'-azobis(isobutyronitrile)
 AIBN, 12
 photochemical initiator, 17
 thermal initiator, 12
- 2-deoxyribose-2-yl radicals
 radical conformation, 107
- 3**
- 3-deoxyribose-3-yl radicals
 radical conformation, 107
- 4**
- 4-deoxyribose-4-yl radicals
 radical conformation, 107
- A**
- absolute rate constants
 definition, 149
 radical reactivity, 149
- acetone
 photochemical initiator, 17
- acyloxy group migration
 more rapid reaction in polar solvents, 25
 rate constants listed in Table 8 of Chapter 8, 167
 the tetra-*O*-acetyl-D-galactopyranose-1-yl radical, 111
- addition reactions
 addition typically is to the less-substituted atom of a
 C-C multiple bond, 194
 chain-transfer step, 23
 factors influencing rates of reaction, 139
 frontier-orbital interactions, 201
 importance of addition to an electron deficient
 multiple, 22
 importance of polar effects, 198
 irreversible addition to a carbon-carbon double bond
 by a carbon-centered radical, 195
- least-hindered pathway in addition to an unsaturated
 carbohydrate, 242
 rate constants given in Table 7 of Chapter 8, 166
 regioselectivity, 193
 requirements for successful addition, 21
 role of steric effects in determining regioselectivity, 198
 the persistent-radical effect, 39
 transition-state structure, 195
 α addition, 66
- adduct-radical stabilization
 importance to regioselective addition, 202
- AIBN
 2,2'-azobis(isobutyronitrile), 12
 2-cyano-2-propyl radical, 12
- alkoxy radicals
 formation from hypiodite photolysis, 53
 formation from phthalimides, 89
 fragmentation reactions, 155
 regioselective ring-opening reactions, 213
 ring-opening reaction, 87
- allylic strain
 definition, 271
 transition-state destabilization, 271
- α - ^{13}C hyperfine coupling constants
 determining radical configuration, 102
- alpha-fragmentation
 elementary reactions, 69
- ambiphilic radicals
 definition, 134
 radical philicity, 133
- ammonium cerium(IV) nitrate
 nonchain reactions, 41
 oxidation of CH-acidic compounds to produce
 electrophilic radicals, 41
 oxidative electron transfer, 34
- anomeric effect, 108, 113
 definition, 108
 explained by orbital interactions, 108
- Arrhenius equation, 128
- atom electronegativity
 used to determine radical philicity, 129
- atomic orbital coefficients
 value in determining the regioselectivity of an addition
 reaction, 201, 202
- atom-transfer reactions

- rate constants, 150
- azo compound initiators, 13
 - Table 1 (Chapter 2), 13
- B**
- barrier to rotation
 - radical conformation, 120
- benzophenone
 - photochemical initiator, 17
- beta-fragmentation (heterolytic)
 - elementary reactions, 69
- beta-fragmentation (homolytic)
 - elementary reactions, 67
- beta-fragmentation reactions
 - regioselective bond cleavage, 213
- beta-glycoside synthesis
 - stereoselective reaction, 273
- bis(cyclopentadienyl)titanium(III) borohydride
 - hydrogen-atom donor in nonchain reactions, 44
- bis(cyclopentadienyl)titanium(III) chloride
 - inner-sphere electron transfer, 43
 - nonchain reactions, 42
 - reductive ring opening, 44
 - see also titanocene(III) chloride, 42
- boat-like transition state, 205, 270
 - five-membered ring formation, 268
 - stereoselective ring formation, 269
- bond polarities
 - radical philicity, 126
- bond strengths
 - importance to regioselective addition reactions, 196
- bond-dissociation energies
 - radical philicity, 126
- bromine atom
 - site-selective, hydrogen-atom abstraction, 222
- Bu₃SnD
 - steric requirements, 244
- C**
- carbohydrates as chiral auxiliaries
 - reaction at remote radical centers, 275
- carbon-carbon bond homolysis
 - nonchain reactions, 52
- carbon-centered radicals
 - chemoselective radical formation, 178
 - chemoselective reaction, 187
 - internal, hydrogen-atom abstraction, 227
 - pyramidal configuration, 101
 - rate constants for hydrogen-atom abstraction, 127
 - rate constants for radical generation, 150
 - regioselective ring opening, 214
- carbon-cobalt bond homolysis
 - cobaloxime complexes, 38
 - coenzyme B₁₂, 35
 - nonchain reactions, 35
- carbon-mercury bond homolysis
 - nonchain reactions, 39
- carbonyl compounds
 - hydrogen-atom abstraction following photochemical excitation, 49
- cation and anion stability
 - use in determining radical philicity, 129
- chain collapse
 - causes of chain collapse, 173
 - definition, 173
 - due to chain shift, 174
 - due to chain termination, 173
 - due to chlorine-atom or bromine-atom abstraction by a carbon-centered radical, 179
- chain length, 20
 - reaction efficiency, 27
- chain reactions, 9
 - chemical initiation, 18
 - efficiency, 27
 - inefficient reactions, 28
 - initiation phase, 10
 - photochemical initiation, 15
 - termination, 25
 - thermal initiation, 10
- chain termination
 - caused by radical combination, 22
 - caused by radical combination or disproportionation, 25
 - minimized by exclusion of molecular oxygen from the reaction mixture, 26
 - reaction with oxygen, 25
- chain-transfer step, 10
 - addition reactions, 23
 - definition, 22
- chair-like transition state, 205, 270
 - five-membered ring formation, 267
 - pseudoequatorial substituents, 272
 - radical conformation, 117
 - six-membered-ring formation, 272

chelation control, 277
chemical initiation
 chain reactions, 18
chemical initiator
 triethylboron, 18
chemoselective reaction
 carbon-centered radical formation, 178
 group abstraction, 181
 halogen-atom abstraction, 179
 importance of unreactive groups and atoms, 187
 preventing reversible addition by bond fragmentation, 186
 preventing reversible addition by hydrogen-atom abstraction, 184
 preventing reversible addition by radical cyclization, 185
 radical addition, 183
 reactions of carbon-centered radicals, 187
chemoselectivity, 178
 definition, 178
 effect of a reversible reaction on chemoselectivity, 181
chiral auxiliaries, 276
 radical addition reactions, 276
 reaction at remote radical centers, 275
 stereoselectivity in bromine-atom transfer, 276
chromium(II) reagents
 nonchain reactions, 48
cobaloxime complexes
 carbon–cobalt bond homolysis, 38
coenzyme B₁₂
 carbon–cobalt bond homolysis, 35
complex-controlled reactions, 276
configurational effects
 definition, 235
conformation
 pyranos-1-yl radicals, 105
conformational and stereoelectronic effects
 stereoselectivity in reactions of pyranos-1-yl radicals, 261
conformational effects
 definition, 235
conformational mobility
 effect on stereoselectivity, 254
contra-thermodynamic regioselectivity, 215
contra-thermodynamic ring opening
 regioselective reactions, 214
Curtin-Hammett principle, 254, 276
 radical conformation, 248

cyclization reactions
 regioselectivity, 204

D

D-galactopyranos-1-yl radical
 conformation, 106, 111
D-glucopyranos-1-yl radical, 103, 114, 115
 conformation, 105, 111
 distorted B_{2,5} boat conformation, 105
 nucleophilic radical, 131
 π-type radical, 102
diastereoselectivity
 definition, 235
disciplined behavior, 21
D-lyxopyranos-1-yl radical
 conformation, 106, 111
D-mannopyranos-1-yl radical
 conformation, 105, 111
 role of kinetic anomeric effect in determining transition-state stability, 255
D-xylopyranos-1-yl radical, 115
 conformation, 105, 111, 114

E

electron spin resonance, 100
electron transfer
 an elementary reaction, 72
 from a CH-acidic compound to manganese(III) acetate, 40
 from samarium(II) iodide to a carbohydrate with a keto group, 46
 homolysis of a carbon–cobalt bond, 70
 inner-sphere, 34
 outer-sphere, 34
 oxidative electron transfer, 34
 reductive electron transfer, 34, 42
 transition-metal complexes, 157
 transition-metal-generated radicals, 34
electronegativity of substituent atoms
 effect on radical conformation, 111
electron-transfer reactions
 rate constants, 156
electron-withdrawing substituents
 effect on rate constants for radical addition, 166
electrophilic radicals
 principal component analysis, 139

radical philicity, 125, 132, 137

elementary reactions, 58

- addition forming a hypervalent atom, 66
- addition to a multiple bond, 64
- bond homolysis, 70
- cyclization, 67
- definition, 58
- disproportionation, 76
- electron transfer, 72
- group abstraction, 63
- group migration, 78
- halogen-atom abstraction, 61
- hydrogen-atom abstraction, 61
- radical combination, 75
- Table 1, 58
- transition-metal complexes, 72
- α -fragmentation, 69
- β -fragmentation (heterolytic), 69
- β -fragmentation (homolytic), 67

enantioselective reactions, 277

enantioselectivity

- definition, 235

endo designation

- a term used in describing radical cyclization, 213

endo face

- a term used to describe ring system, 239

endo-exo designations

- terminology for describing ring formation, 213

Evans-Polanyi relation, 125, 138, 196, 201

- transition-state location, 223

exo designation

- a term used in describing radical cyclization, 213

exo face

- a term used to describe ring systems, 239

exo-endo designations

- terms used in describing ring formation, 205

F

first-formed radicals, 100

five-membered ring formation

- chair-like transition state, 267

flagpole interactions, 205

fragmentation reactions

- alkoxy radicals, 155
- elementary reactions, 67
- rate constants, 155
- regioselective radical expulsion, 213

regioselective ring opening, 213

free radical

- definition, 9

free-radical reaction

- definition, 9

frontier-orbital interactions

- definition, 103
- electrophilic radicals, 138
- explaining radical addition reactions, 142
- explaining radical conformation, 106
- explaining radical nucleophilicity, 135
- explaining radical philicity, 134
- explaining radical structure, 103
- explaining the quasi-anomeric effect, 110
- importance to regioselective addition, 201, 202
- p_c/p_o orbital interaction, 107
- when it is appropriate to use these interactions, 134

furanos-1-yl radicals

- conformational mobility, 262
- radical conformation, 118
- stereoselectivity of reactions, 262

fused-ring systems

- endo face, 239
- exo face, 239

G

group abstraction

- chemoselective reaction, 181

group compression, 196

group migration

- rate constants, 167
- sequential reactions, 94

group-transfer reactions

- rate constants, 152
- reversible reactions, 152

H

halogen-atom abstraction

- chemoselective reaction, 179
- order of reactivity, 179
- rate constants, 150
- site-selective reaction, 228

Hammond's postulate, 222

hexamethylphosphoramide (HMPA)

- effect on samarium(II) iodide reaction, 47

highest occupied molecular orbital

HOMO, 103
HOMO, 110, 201
 definition, 103
 electrophilic radicals, 138
 nucleophilic radicals, 135
hydrogen bonding
 effect on radical conformation, 115
 effect on radical cyclization, 117
 effect on stereoselectivity, 117
 effect on transition-state stabilization, 271
hydrogen-atom abstraction, 180
 by D-glucopyranos-1-yl radicals (unexpectedly small rate constant), 171
 by excited carbonyl compounds, 49
 dependence on radical philicity, 139
 rate constants, 158
 regioselectivity, 220
 stereoselectivity, 242
hydroxyl radical, 107
 abstraction of a hydrogen atom, 222
 hydrogen-atom abstraction from a C-H bond, 222
 hydrogen-atom abstraction from sucrose, 224
 reaction with α -D-glucopyranose, 100
hypervalent atoms
 elementary reactions, 66
hypoiodite photolysis
 alkoxy-radical formation, 53

I

induced decomposition, 12, 15
initiation phase
 chain reactions, 10
initiators
 azo compounds, 13
 azo compounds (Table 1, Chapter 2), 13
 half-life, 12
 peroxides, 14
 peroxides (Table 2, Chapter 2), 14
 requirements for successful initiators, 12
inner-sphere electron transfer, 34
 bis(cyclopentadienyl)titanium(III) chloride, 43
 manganese(III) acetate, 40
 samarium(II) iodide, 46
internal hydrogen-atom abstraction
 carbon-centered radicals, 227
 oxygen-centered radicals, 225
inversion of configuration

 carbon-centered radicals, 104
iodine-atom abstraction
 rate constants, 159
isonitriles
 site-selective reactions, 230

K

kinetic anomeric effect, 260, 262, 274
 definition, 255
 maintaining stabilizing orbital interaction in the transition state, 259
 stabilization due to orbital interactions, 246
 supersteric radicals, 265
 transition-state stabilization, 255

L

least-hindered pathway, 237
 importance to stereoselectivity, 236
 minimizing steric interactions, 236
 radical addition to an unsaturated carbohydrate, 242
locked conformations
 radical conformation, 119
lowest unoccupied molecular orbital
 LUMO, 103
low-temperature initiation
 triethylboron–oxygen, 19
LUMO, 110, 202
 definition, 103
 nucleophilic radicals, 135, 137

M

manganese(III) acetate
 structure, 41
manganese(III) acetate reactions
 formation of cations from carbon-centered radicals, 41
 inner-sphere electron transfer, 40
 nonchain reactions, 40
 oxidative electron transfer, 34
 radical formation from CH-acidic compounds, 40
molecular mechanics
 regioselective ring opening, 214
molecular orbital theory
 radical philicity, 134
molecular-orbital calculations (ab initio)

determining radical philicity, 130
radical conformation, 113

N

nonchain reactions, 33
 ammonium cerium(IV) nitrate, 41
 bis(cyclopentadienyl)titanium(III) borohydride, 44
 bis(cyclopentadienyl)titanium(III) chloride, 42
 carbon–carbon bond homolysis, 52
 carbon–cobalt bond homolysis, 35
 carbon–mercury bond homolysis, 39
 chromium(II) reagents, 48
 manganese(III) acetate, 40
 oxidative electron transfer, 34
 oxygen–iodine bond homolysis, 53
 photochemically generated radicals, 48
 reductive electron transfer, 42
 samarium(II) iodide, 45
nucleophilic radicals
 radical philicity, 125, 131, 135

O

orbital interaction
 the quasi-anomeric effect, 109
orbital interaction (p_o/p_o)
 radical conformation, 107
 radical structure, 103
orbital interaction (p_o/σ^*)
 radical conformation, 106
order of reactivity
 halogen-atom abstraction, 179
organosamarium compounds, 45
organotitanium compounds, 43
O-thiocarbonyl group abstraction
 chemoselective reaction, 182
outer-sphere electron transfer, 34
oxidative electron transfer
 ammonium cerium(IV) nitrate, 34
 homolytic cleavage of a carbon–cobalt bond, 35
 manganese(III) acetate, 34
 nonchain reactions, 34
oxygen, molecular
 chain termination, 25
oxygen-centered radicals
 intramolecular hydrogen-atom abstraction, 225
 regioselective ring-opening, 213

oxygen–iodine bond homolysis
 nonchain reactions, 53

P

parallel reactions
 sequential reactions, 93
Pauling's electronegativity values, 126
peroxide initiators
 Table 2, (Chapter 2), 14
persistent radicals, 9
persistent-radical effect, 39
phosphatoxy-group migration, 167
photochemical initiation
 chain reactions, 15
photochemical initiators
 2,2'-azobis(isobutyronitrile), 16
 acetone, 17
 benzophenone, 17
 hexaalkylditins, 18
photochemically generated radicals
 nonchain reactions, 48
pi-type radical, 102
 D-glucopyranos-1-yl radical, 102
 radical configuration, 101
planar configuration
 radical structure, 101
polar effects
 definition, 198
 importance to regioselective addition, 198
polarity matching, 128
 hydrogen-atom abstraction by an oxygen-centered radical, 220
 rate of hydrogen-atom abstraction, 143
polarity-reversal catalysis
 radical philicity, 142
polymerization
 prevented by hydrogen-atom abstraction, 184
polymerization reaction, 10
primary radicals
 internal hydrogen-atom abstraction, 228
principal component analysis, 139
 determining radical philicity, 129
propagation phase
 chain reactions, 19, 20
pseudo-1,3-diaxial interaction, 273
 transition-state destabilization, 270
pseudoequatorial substituents

chair-like transition state, 272
 radical conformation, 117
p-type orbital, 103
 radical structure, 101, 102
 pyramidal configuration
 radical structure, 101
 pyranos-1-yl radical formation
 stereoselectivity, 246
 pyranos-1-yl radical reactions
 stereoselectivity, 249
 pyranos-1-yl radicals
 conformation, 105
 effect of radical conformation on reaction
 stereoselectivity, 256
 reduced ability to abstract hydrogen atoms, 172
 stereoselectivity determined by the kinetic anomeric
 effect, 255
 stereoselectivity when steric effects are demanding,
 261
 transition-state stabilization by the kinetic anomeric
 effect, 255
 pyranos-5-yl radicals
 quasi-anomeric stabilization, 117
 radical conformation, 117

Q

quantum yield
 definition, 16
 interpretation, 50
 nonchain reactions, 50
 quasi-anomeric effect, 113, 114, 247
 "locked conformations", 119
 orbital interaction, 109
 quasi-anomeric stabilization
 pyranos-5-yl radicals, 118

R

radical addition
 chemoselective reaction, 183
 factors controlling regioselectivity, 195
 radical philicity, 140
 rate constants, 165
 steric effects in reactant molecules, 241
 radical anomeric effect
 see kinetic anomeric effect, 255
 radical chain reactions, 10
 radical combination
 stereoselective reaction, 264
 radical configuration
 α -¹³C hyperfine coupling constants, 102
 π -type, 101
 radical conformation
 (p_c/σ^*) interaction, 106
 2-deoxyripyranos-2-yl radicals, 107
 3-deoxyripyranos-3-yl radicals, 107
 4-deoxyripyranos-4-yl radicals, 107
 chair-like transition state, 117
 Curtin-Hammett principle, 248
 effect of substituent-atom electronegativity, 111
 frontier-orbital interactions, 106
 hydrogen bonding, 115
 molecular-orbital calculations (ab initio), 113
 pseudoequatorial substituents, 117
 pyranos-5-yl radicals, 117
 radical structure, 104
 stereoselectivity, 248, 260
 stereoselectivity in reactions of pyranos-1-yl radicals,
 256
 steric effects, 114
 the quasi-anomeric effect, 109
 radical cyclization
 factors determining ring size, 204
 rate constants, 162
 transition-state structure, 205
 radical philicity, 124
 a limitation on extrapolating alkyl radical reactivity to
 carbohydrate radicals, 143
 comparing procedures for assigning radical philicity,
 130
 determined from ab initio molecular orbital
 calculations, 130
 determined from cation and anion stability, 129
 determining radical philicity, 128
 effect of atom electronegativity, 129
 effect of diminishing delocalization, 145
 electrophilic radicals, 125, 132, 137
 explaining radical philicity, 130
 extrapolating results from model radicals, 142
 frontier-orbital interactions, 134
 hydrogen-atom abstraction, 139
 importance of bond polarities, bond-dissociation
 energies, and rate constants for hydrogen-atom
 abstraction reactions, 126
 in addition reactions, 140
